- Introduction
- Dataset
- Q1: show the age of participants and BMI
- Q2: Which type of IBD tends to have sufferers of a higher BMI?
- Q3: Which type of IBD has more sufferers that smoke or previously smoked?
- Q4: Which type of IBD has more cancer sufferers?
- Q5: Which type of IBD has more heart disease sufferers?
- Q6: Which age group is most affected by Ulcerative colitis (diagnosis type 2 in the dataset)

I received a task asking me to analysis data for inflammatory bowel disease patients.
The task asked me to answer some questions

1. show the age of participants and BMI
2. Which type of IBD tends to have sufferers of a higher BMI?
3. Which type of IBD has more sufferers that smoke or previously smoked?
4. Which type of IBD has more cancer sufferers?
5. Which type of IBD has more heart disease sufferers?
6. Which age group is most affected by Ulcerative colitis (diagnosis type 2 in the dataset)

Dataset

The data contains information about 33K patients The data columns as follow

- pt-ID: unique ID for each patient
- gender: integer value indicates the gender of each patient
  - 1 means male
  - 2 means female
- diagnosis: integer value indicates the type of IBD
  - 1 means Crohn's
  - 2 means UC
  - 3 means Unspecified
  - 4 means Other
- hosp-admin: integer value indicates if the patient recorded in a hospital or not
- age-band-jan1: the age value for each patient
- bmi: contains the body mass for each patient
- smoker: is the patient smoker or not
- past-smoker: is the patient was smoker or not
- diet-preference: which diet the patient follows
- cancer: is the patient has cancer or not
- heart-disease: is the patient has heart disease or not

Please keep in mind this is just a **descriptive statistics**

BMI categories

Just understand the data, but **don't** make any conclusions

IBD types:-

- 1 means Crohn's
- 2 means UC
- 3 means Unspecified
- 4 means Other
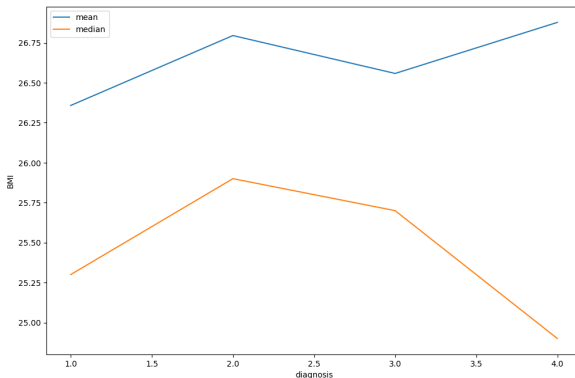

Type 2 (UC): has the BMI
Type 4: effect by outliers

IBD types:-

- 1 means Crohn's
- 2 means UC
- 3 means Unspecified
- 4 means Other
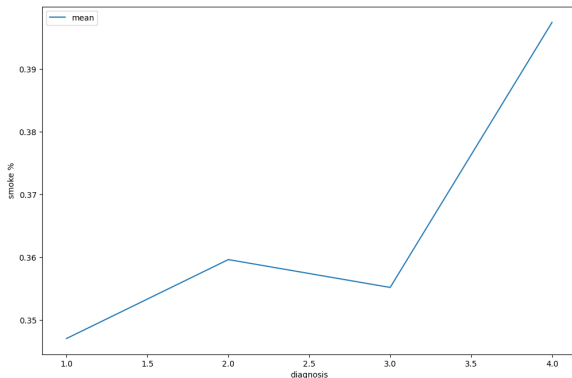

Type 4: has the highest smoking percentage

Q4: Which type of IBD has more cancer sufferers?

IBD types:-

- 1 means Crohn's
- 2 means UC
- 3 means Unspecified
- 4 means Other

Type 3: has the highest cancer percentage

IBD types:-

- 1 means Crohn's
- 2 means UC
- 3 means Unspecified
- 4 means Other

Type 2: has the highest heart disease percentage

gender types:-

- 1 means Male
- 2 means Female
